Brookstone Builders, Inc. Completes University of Massachusetts Repurposing Project

MANCHESTER, NH – (January 28, 2019) **Brookstone Builders, Inc.**, construction managers and general contractors headquartered in Manchester, New Hampshire, recently announced that they have completed a repurposing project at the **University of Massachusetts Lowell**.

This project involved the partial renovation of an existing structure at 203 Riverside Street within the university's Lowell campus, and repurposing the space for trade education and research. The scope-of-work included demolition, abatement, mechanical and electrical work, plumbing, office and bathroom fit-ups, masonry work, finishes, and a small amount of site work. Other parts of the building remained occupied and fully-functional during construction.

Dinisco Design of Boston served as the project's architects.

"We enjoyed working with U Mass Lowell on this project," said Brookstone Builder's President **Paula Scales**. "Our crews are well-suited to working in-and-around occupied space, which is often part-and-parcel with renovation work, and which requires enhanced safety, noise control and dust abatement protocols."

A woman-owned enterprise, **Brookstone Builders, Inc.** was founded in 1984. The company provides commercial, industrial, and design-build solutions throughout northern New England, and has also been involved in a wide range of specialty and renovation projects.
