

City Hall Auditorium Concord, NH

Brookstone Builders was selected to construct the new lobby and restrooms to this historic structure in Concord, NH, which now provides the theater patrons

a place to meet prior performances.

This addition was enhanced by the utilization of stained glass windows that were salvaged from a local church and incorporated into the design. These large windows were incased in custom-made wooden frames to preserve them from the elements.

Architect: Dick Dudley Architects

Seven years after the lobby addition, Brookstone Builders was once again selected to construct a four story stair tower as an addition to the existing Concord City Hall Auditorium.

This tower provides the necessary emergency egress for the auditorium actors and back stage personnel.
